Cleaning Photovoltaics

CLEANING of solar cells / PHOTOVOLTAIC

Increasing efficiency through
cleaning of solar cells

The Sunny Clean GmbH offers professional cleaning to companies and houses that work with photovoltaic systems. In this case, we work with a stick and with demineralised water (pure water)! Studies show an increase in the efficiency up to 15% of regularly cleaned plants. The aim of Sunny Clean is to achieve economically this result and to manage it. We use a system with a rotating brush and demineralised water which, additionally, helps to prevent dirt.

- **Flexible use of mobile system**
- **Economic use by use as needed**
- **No use of chemicals necessary**

With prices of cleaning per square meter which are between 1.0 and 2.5 €, depending on the frequency of cleaning and size of the plant, is the use of the flexibility as well as the speed anytime and anywhere feasible. We would like to advise you how we can help you as service providers on the spot. Take advantage of our experience with demineralised water and arrange an appointment this very day for your photovoltaic system.
